

THE FUTURE OF AMATEUR RADIO IS IN YOUR HANDS!

TRAIN TO BE A TRAINER

Train the Trainers Course

18th April, 2020, Cardiff University

Help the future of our hobby by training more Radio Amateurs

We need to recruit more radio amateurs across our region. Our local clubs and individuals do a great job delivering amateur radio courses, to students from a wide age range and who have vastly different levels of knowledge and abilities, despite not coming from a professional teaching background.

Upgrade your teaching skills

The RSGB Train the Trainers course aims to build on the subject knowledge our trainers already have and helps them apply the latest teaching good practice, as used by professional teachers up and down the country, to their courses.

Free one-day course

This one-day course, for RSGB members and members of RSGB affiliated clubs, was devised and is delivered by a team of radio amateurs who are practising professional teachers with over 50 years experience in the classroom between them.

Venue:

The Engineering Buildings,
5 The Parade, Cardiff
CF24 3AA

Time: 09:00 - 16:30

Attendees comments...

"I really enjoyed the experience and I'm certain everyone else did too."

"Just a note to thank you all for a most enjoyable day. Having been subjected to an exclusively chalk and talk education years

ago, your lecture was a revelation."

"It is an excellent course; thought-provoking, stimulating and above all, useful; and much needed. Oh, and it was great fun. Thank you."

"Following the Train the Trainers course in November I have slowly started to change the training programme. Only two Foundation courses since then, however the changes made, more operating, digital modes, trying to assess individual needs etc. seems to be working so
